Outdoor (Acrylic Fabrics)

This is a type of fabric we often use in many parts of our lives. It is made from acrylic fibers which are synthetic polymers. It gives off a soft feeling like cotton. It is easy to wash and doesn't deform with intensive washing. It is highly resistant to chemicals and sunlight. It Provides a feeling of warmth and naturalness with its wool-like structure. It is a light fabric that keeps you warm but doesn't make you sweat. Its stain retain rate is quite low. With a 3 year guarantee against fading and impermeability, Acrylic Fabrics are now among your options.

Profile Colors

As you know, the chain is as strong as its weakest link. Paint application is the weakest link of Metal Garden Furniture. Even if you use the best and thickest pipe, the lifetime of your furniture will equal the lifetime of the paint. The type and brand of the paint you use is important, but what is more important is how prime the metal surface which the paint will adhere to . Lifetime of the applied paint will be limited to months unless the metal surface on which the paint will adhere has adequate quality to hold the paint. Paint application is the biggest element that brings forward the quality of ERİNÖZ branded products. Because Our facility, where we paint garden furniture, provides painting service for prominent brands of white appliances and automotive industry as a CERTIFIED application and service provider. Preliminary cleaning of parts are conducted and they are taken under the painting process with the spray system surface process line, where nano surface process chemicals are used. The products are painted without the touch of a human hand from the first hanging part on the conveyor until it is put down at the end of the process to ensure high corrosion resistance. Kum Taşı (7006 Kahve) The major property that should be taken into consideration in the choice of paint is POLYESTER structure and UV resistance. Also Lead is steel used in most of the powder paints produced in the sector These types of paints are both harmful to human health and have negative impact on the environment. Lead-reinforced power paint is not used by any means on ERİNÖZ branded garden furniture.

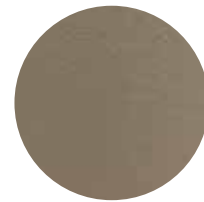

Textured Anthracite

Sand Surface

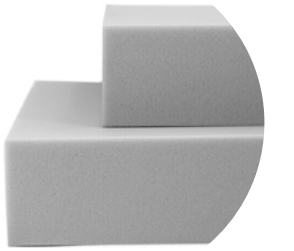

White

Sand Stone

Foam

The foam used in our products is gray and has a density of 28D. It does not contain chemical substances that harm human health. It is in compliance with Reach directives.
